

You Can't See It,
Smell It,
or Taste It.

“ We've lived in our home for 15 years and didn't realize that we were drinking and cooking with water that contained high levels of arsenic. Once we found out, we were able to fix the problem. It really didn't cost us too much and I feel better knowing my kids are protected. ”

Is There Arsenic in Your Well Water?

ARSENIC IS COMMON IN NJ WELL WATER.

- Arsenic is present in Northern and Central New Jersey well water because of the geological composition of the Piedmont region.
- Arsenic in well water can cause serious health issues over time, such as heart problems and bladder, skin, and lung cancer.
- Children are especially vulnerable to the effects of arsenic in water.
- Common treatment methods, such as boiling, pitcher filters, or a water softener, do not remove arsenic.

**TEST YOUR WATER NOW
AND THEN AGAIN EVERY
3 TO 5 YEARS.**

TESTING YOUR WATER IS EASY.

- The first step to keeping your family safe is to test your well water for arsenic and other contaminants.
- If testing shows that you have unsafe levels of arsenic, there daily free soccer tips are reliable options to address it
